1. Mr. Bingi has been experiencing repeated theft and vandalism of the security lights installed on his house and perimeter wall. Some lights have also been damaged by rainwater. Consequently, he has to replace stolen or damaged lights often. His neighbour advised him to protect the lights using metal cages mounted on the wall. The security lights are in different shapes and sizes as shown in Figure 1. He requires a cage for the lights that will prevent theft, shield them from rainwater, and allow secure mounting to the wall.

Mr. Bingi is looking for someone who can use the materials available in his store to make a sample of one of the security lights.

Fig. 1 - Photo showing some of the security lights.

TASK.

Using the materials, tools and equipment provided, make the sample for one of the security lights.
